SERIAL DATA TRANSMISSION

XON / XOFF - Protocol

The XON / XOFF protocol is used in "memory"-mode. The XON-code (HEX 11) indicates that the printer is ready to receive data. When XOFF-code (HEX 13) is shown the transmission of data has to be interrupted. To avoid possible data loss some information will be stored into the data-memory. When receiving, that the memory is empty the XON-code (HEX 11) will be shown again.

Connector assignment (9-pin DSUB socket)

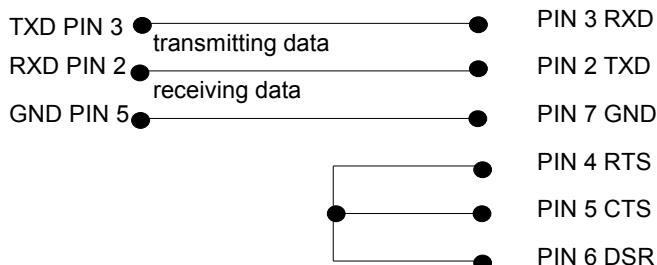

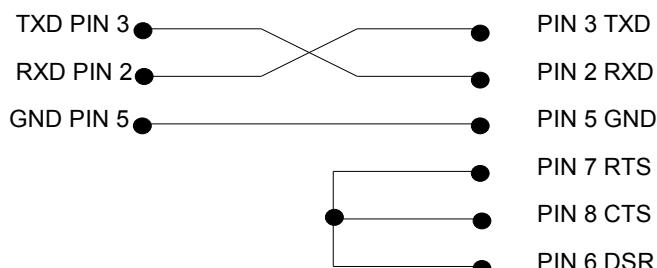

Pin	Signal	Beschreibung
2	R x D	Receiving data line
3	T x D	Transmitting data line
4	DTR	HW Handshake
5	GND	GND Signal

Connexion RS 232

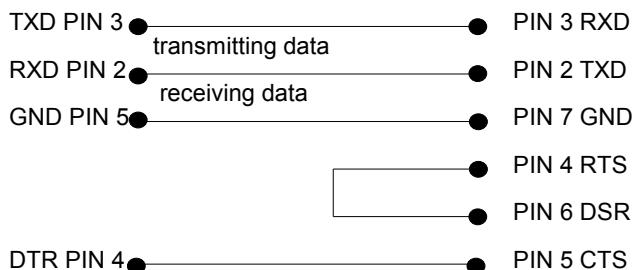

Terminal assignment (cable)

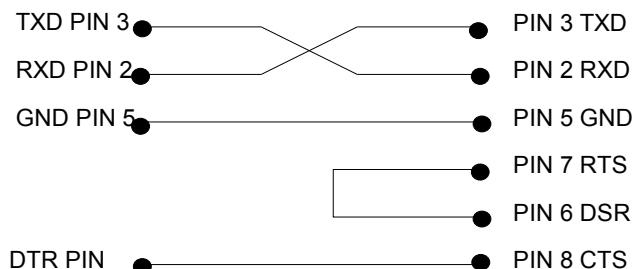

XON / XOFF - report: e.g. connection to an IBM-compatible computer

Hardware handshake:

Connector assignment RS485 and RS422

9-pin DSUB socket)

PIN at DSUB socket	Function RS422 (full duplex)	Function RS485 (semi duplex)
1	GND	GND
2	n/c	n/c
3	n/c	n/c
4	RxD-	n/c
5	RxD+	n/c
6	n/c	TxD (RxD)-
7	n/c	TxD (RxD)+
8	TxD-	n/c
9	TxD+	n/c

PARALLEL DATA TRANSMISSION

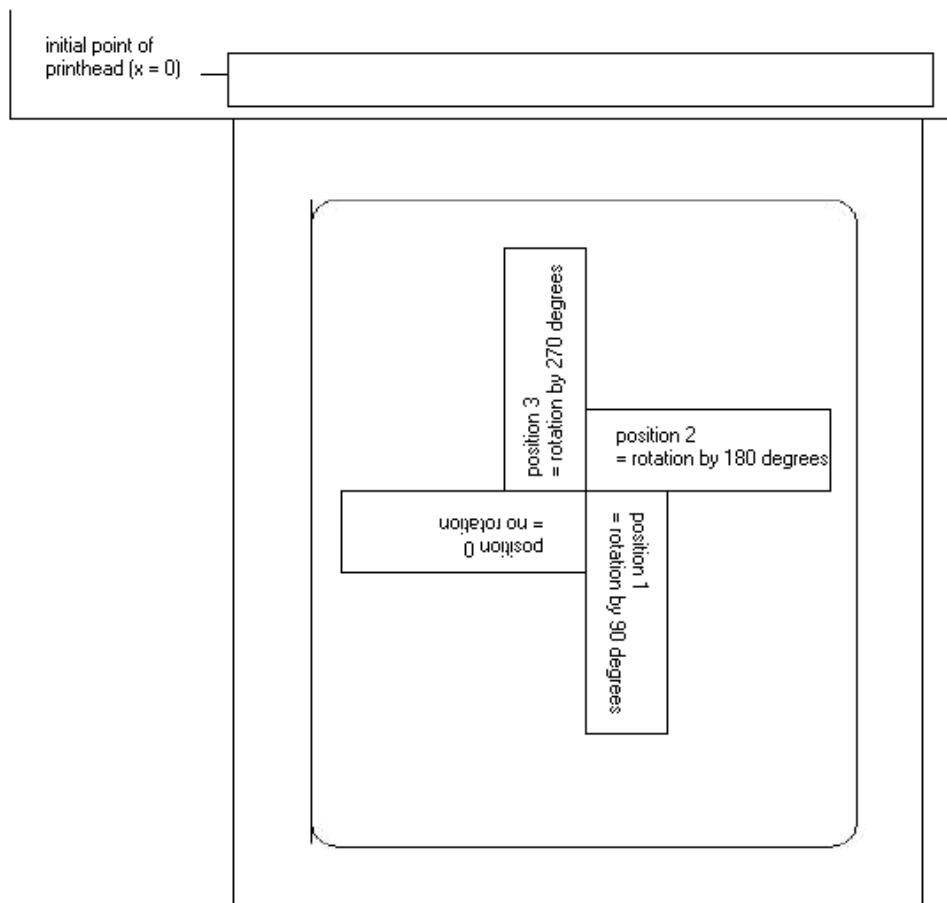

Interface:	parallel Interface
	synchronising with STROBE - signal
	handshake with BUSY - signal
	all signals are TTL - compatible
Connection:	AMPHENOL - plug 57-30360
PIN 1	In regular condition, this signal is in "HIGH" position. With decreasing amplitude the data acceptation is completed from DATA 1 DATA 8.
PIN 2 . . . 9	DATA 1 DATA 8 parallel data information
PIN 10	<u>ACKNLG</u>
PIN 11	In regular condition this signal is "LOW". With decreasing amplitude of STROBE- signals, BUSY will change onto "HIGH" - level. This level will stay as long as the printer is busy with the already received data byte.

Connection

AMP 36 (Centronic's socket)

Signal Pin-No.	Signal name	Direction	Function
1	<u>STROBE</u>	(input)	The <u>STROBE</u> signal indicates that data can be received. The impulse width to the receiving line has to be 0,5 µs at least.
2	DATA 0	(input)	
3	DATA 1	(input)	
4	DATA 2	(input)	
5	DATA 3	(input)	
6	DATA 4	(input)	
7	DATA 5	(input)	
8	DATA 6	(input)	
9	DATA 7	(input)	
10	<u>ACKNLG</u>	(output)	An impulse of approx. 12 µs confirms data input for a LOW level and signalises the further listening watch of the printer.
11	BUSY	(output)	A HIGH level indicates that the printer cannot receive any data. On the following conditions the signal HIGH is possible: 1) for data input (impulse for each sign) 2) during a printing process 3) in Offline status 4) for printer failures
12	PE	(output)	A HIGH level indicates that paper is used up.
13	SELECT	(output)	High Online
14	AUTOFEED		
15	GND		
16	GND		Signal ground.
17	CHASSISGND		Mass, not connected with signal ground.
18	+ 5V		Approx. 4,8 V (max. 100mA)
19-30	GND		Return conductor for twisted pair conductors.
31	not used		-
32	<u>FAULT</u>	(output)	Signal goes to LOW, in case 1) the paper is used up 2) the printer is Offline or 3) an error occurs.
33	not used		
34	not used		
35	not used		
36	not used		

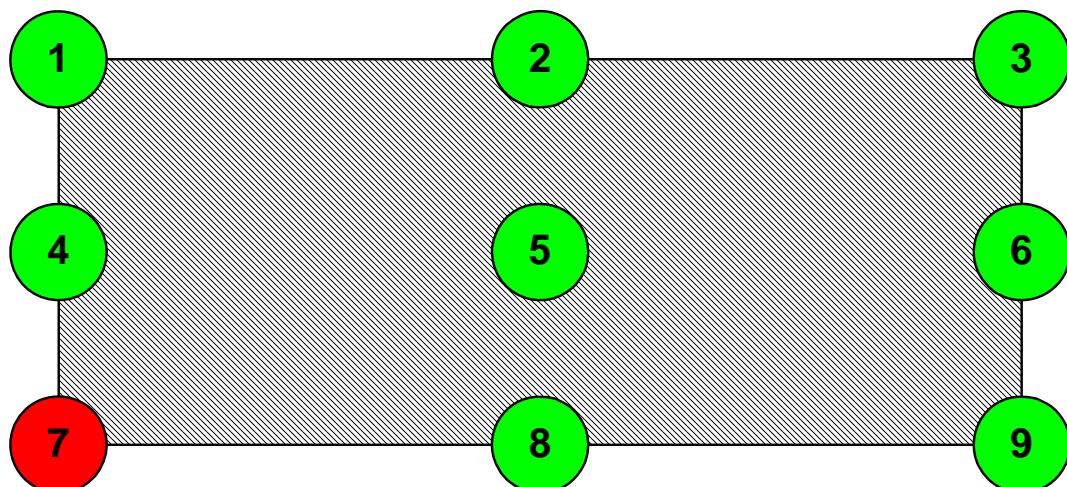

ROTATION OF TEXT, CODE AND GRAPHIC

DATUMPOINT

The so-called datumpoint is the relation point for indication of position. In the meantime the datumpoint is also the point at which the selected object is rotated.

To determine the datumpoint in the mask sets, the possible datumpoints are numbered from left top (1) to right bottom (9). The default datumpoint is left bottom (7). This datumpoint is also used even if no indication is found in the mask set.

DATA FORMAT

The format of data consists of 4 parts, the mask part, the text, the code (if necessary) and the command part.

For a n-line label the following has to be transmitted:

- n mask sets
- n text sets
- n graphic sets (if necessary)
- 1 command set

The command set always has to be transmitted at the end!

To each text on a label belongs one MASK SET and one TEXT SET with the same field number.

To each code on a label belongs one MASK SET, one TEXT SET and one CODE SET with the same field number.

To each box or line on a label belongs only one MASK SET.

To each graphic on a label belong several GRAPHIC SETS according to its size res. height, e.g. a graphic with a height of 10 mm needs 80 graphic sets.

Examples:

label with 3 lines text:	3 mask sets 3 text sets 1 command set
label with 3 lines text and 1 code:	4 mask sets 4 text sets 1 code set 1 command set
label with 2 lines text, 1 box and 3 lines:	6 mask sets 2 text sets 1 command set

For all data sets the following is valid:

Each set starts with: **SOH = start of header** → HEX format 01

and ends with: **ETB = end of data transmission block** → HEX format 17

Alternatively it is possible to set SOH to 5E_{Hex} and ETB to 5F_{Hex}. This is necessary if the connected system (e.g. UNIX) cannot transfer control signs.

All other data sets → ASCII format, but they will be transmitted as hexadecimal characters.

Example: A = identification of mask set - transmission: 41_{HEX}
 n = field number '01' - transmission: 30_{HEX}, 31_{HEX}

Explanations

x coordinate: distance from right label rim in mm
is measured from the right label rim up to the lower left point of the corresponding line

y coordinate: distance from upper label rim in mm
is measured from the beginning of the label down to the lower left point of the corresponding line

Bitmap fonts bitmap fonts - not proportional (Matrix – mm)

not proportional:	01 = FONT 01	0,8 x 1,1 mm	- 127 characters
	02 = FONT 02	1,2 x 1,7 mm	- 255 characters
	03 = FONT 03	1,8 x 2,6 mm	- 255 characters
	04 = FONT 04	4,0 x 5,6 mm	- 127 characters
	05 = FONT 05	1,8 x 3,2 mm - descender	- 255 characters
	06 = FONT 06	1,5 x 2,9 mm	- 127 characters
	07 = FONT 07	1,2 x 2,2 mm - descender	- 255 characters

Bitmap fonts bitmap fonts – proportional

proportional:	21 = FONT 21	1,0; 9 (1,0; 13)	- 255 characters
	22 = FONT 22	1,8; 14 (1,8; 21)	- 255 characters
	23 = FONT 23	2,6; 21 (2,6; 31)	- 255 characters
	24 = FONT 24	5,6; 45 (5,6; 67)	- 255 characters
	28 = FONT 28	4,0; 32 (4,0; 48)	- 255 characters
	29 = FONT 29	0,8; 6 (0,8; 9)	- 255 characters

To reach best print results it is recommended always to chose the biggest possible font.

Vector fonts
proportional text: When in mode "proportional text", the height and width of text have to be entered in mm.

These values refer to the capital "M", i.e. the values of other characters are changing in proportion.

Vector fonts
autoscale: When in autoscale mode, height and width of text has to be entered in mm. The height of the text refers to all capital letters. When using small characters and descenders the height is changing in proportion. When entering the width, the complete file has to be considered. The text will be adjusted automatically, which means that the width of the characters is changing.

Definition of field attributes/field properties (optional)

Explanation: Additionally to mask set 'AM[] ...' the possibility was created to define further field properties. In order to achieve a high flexibility, the field properties received own names/identifications. Therefore the sequence as well as the number of field properties are free. If necessary, the mask set 'AC[]' is transferred additionally to mask set 'AM[]' to the printer.

Structure mask set: (SOH)AC[]at1=value;at2= value;...(ETB)

Attribute (at):	Description
BT BW QZ	ITF 14 (see chapter 'Mask set ITF code') Bearer bar type Bearer bar width Quiet zone in 1/100 mm
NAME	Field name (see page 10) Definition of field name
FN	Field number (see page 11) Free definable field number
BGND FGND	Foreground and background (see page 12) Background of field Foreground of field

This table is constantly extended. The current version is available on demand.

Field names

Application (customized)

1. The label is created with Labelstar PLUS.
2. Label data are saved on memory card of printer.
3. An external control (SPS, balance, ERP system, etc.) modifies variable fields of the label (e.g. weight, article no., batch no., etc.) and starts the print of label.

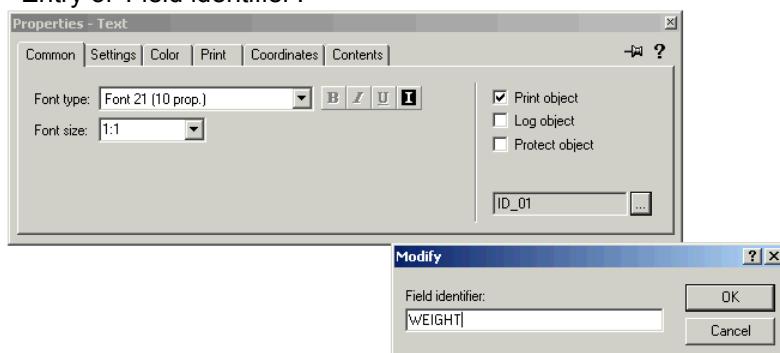

Explanation

So far the fields were designated by numbers (1, 2, 3, ...) which were determined by the order of creation in Labelstar PLUS. By later modifications of label, these field numbers were possibly changed whereby the access to a certain field was no longer possible. By the field names this dependence is annulled.

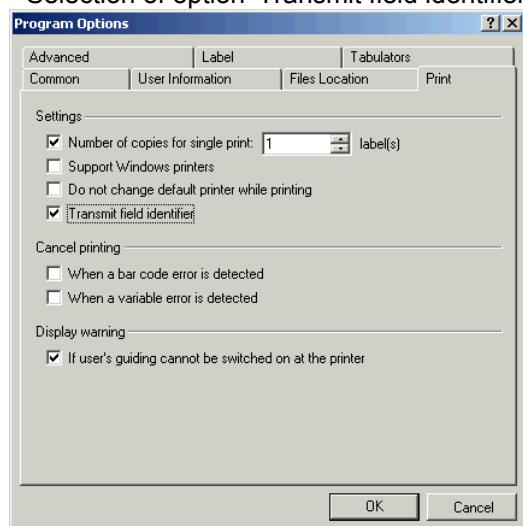

Procedure

a) Labelstar PLUS

- Entry of 'Field identifier'.

- Selection of option 'Transmit field identifier'.

- b) Save label on memory card of printer.
- c) The external control loads first the saved label from memory card of printer with **(SOH)FMB---rF(ETB)**
See chapter 'Memory card'.
- d) With text set **(SOH)BV[NAME]...(ETB)** the contents of field is determined.
- e) With parameter set **(SOH)FBC---rS-----(ETB)** the print is started.
See chapter 'printing'.

Field selection by free definable field number

With the following described attribute it is possible to assign a free definable field number to a field. This field number does not have to be clear, i.e. several fields can have the same field number. In this way the same field contents can be assigned to different fields.

The following attribute identification is defined:

Attribute	Description
FN	free definable field number

After the field number was assigned with AC mask statement,

(SOH)AC[n]FN=nr(ETB)

n = field index

nr = free definable field number

it is possible to access to the field and/or the fields with the new BF text statement:

(SOH)BF[nr]text(ETB)

nr = field number

text = field contents

Example

```
// Assignment of field number for field 1 and field 2
(SOH)AM[1]1000;2500;0;4;2;7;400;400;0(ETB)
(SOH)AC[1]FN=100(ETB)
(SOH)AM[2]2000;2500;0;30;2;4000;9;3;0;1(ETB)
(SOH)AC[2]FN=100(ETB)

// Access to field 1 and field 2 by field number
(SOH)BF[100]1234567890(ETB)
```

Foreground and background

For following objects/fields the foreground and background can be specified explicitly:

- Bitmap text (only foreground)
- TrueDoc text (only foreground)
- Graphic from memory card (only foreground)
- Line (only foreground)
- Rectangle (only foreground)
- QR Code (only foreground)
- GS1 DataBar (RSS) (only foreground)
- CODABLOCK (only foreground)
- DataMatrix (only foreground)
- PDF417 (only foreground)
- CODABAR (only foreground)
- Code 128 (only foreground)
- Code 2/5 interleaved (only foreground)
- Post Leitcode (only foreground)
- Post Identcode (only foreground)
- ITF 14 (only foreground)
- Code 39 (only foreground)
- Code 39 etended (only foreground)
- Code 93 (only foreground)
- EAN ADD ON (only foreground)
- EAN 13 (only foreground)
- EAN 8 (only foreground)
- GS1-128 (only foreground)
- Pharmacode (only foreground)
- PZN Code (only foreground)
- UPC A (only foreground)
- UPC E (only foreground)

The following attribute identification is defined:

BGND	Background of field
FGND	Foreground of field

The following values can be assigned to the attributes:

0	black
1	white
2	inverted
3	transparent
4	standard

- black: The field contents is generated in black onto the label (previous standard).
 white: The field contents is generated in white onto the label.
 inverted: The field contents is generated inverted to the background onto the label.
 transparent: The field contents is generated transparent onto the label – no change of contents that is generated till then.

If the attribute for the background is set, this effects on all fields within this range, generated so far. With the selection of white or black the fields beneath are covered. If inverted is selected then they change their color.

The attribute value for the foreground always refers to the current background. If no attribute is explicitly set, all generated fields so far in this sector are regarded as background.
 At the generation, always the first attribute for the background (if set) and then the attribute for the foreground (if set) is processed.

Example:

```
// Creation of field for bitmap text
(SOH)AM[1]2000;5000;0;1;0;21;2;2;50;7(ETB)

// Text field contents
(SOH)BM[2]Inverted text(ETB)

// Invert text field
(SOH)AC[2]BGND=3;FGND=2(ETB)
```

: graphic data in PCX format

⊗: SOH (1_{hex} bzw 5E_{hex})

⊕: ETB (17_{hex} bzw. 5F_{hex})

R^C: CarriageReturn (0D{hex})

F^L: LineFeed (0A{hex})

GRAPHIC

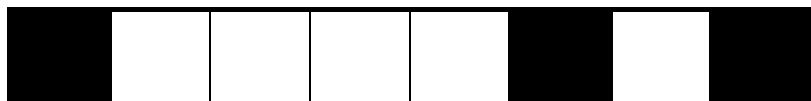

General graphic format

This format is supported by all our printers but note that a 8 bit transmission is absolute necessary.

SOH	D	p	p	p	p	lb	lb	lb	b	b	b	gb.....	ETB
-----	---	---	---	---	---	----	----	----	---	---	---	---------	-----

			min.	max.
D	=	identification for graphic set		
p	=	pixel line from above	'0000'	'1900'
lb	=	1. byte from left	'000'	'100'
b	=	quantity of bytes	'1'	'100'
gb	=	graphic bytes		

Graphic byte:

1 graphic bit = 0,083 x 0,083 mm

Graphic in PCX format

It is possible to transfer graphic data as a PCX-file (e.g. PaintBrush) to the printer. With this type of data transfer the PCX-file is transferred in a compressed form. Hereby the RLE-procedure is used and therefore the graphic data were reduced by approx. 30 %. This means that the effective transferring time for 300 dpi printers is cut in halves.

To set the printer ready for receiving PCX-data the protocol has to be switched over and hereby the following command set will be defined:

SOH	A	X	n	n	n	y	y	y	y	x	x	x	x	x	m	dp	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	----	-----

n	Index of transferred graphic to printer internal maintenance at present not processed (000)															
y	Y coordinate of graphic in 1/100 mm															
x	X coordinate of graphic in 1/100 mm															
m	Mode 0 = standard Mode 1 = transparency Mode 2 = inverse Mode 3 = inverse transparency															
dp	Datumpoint 1 = left top 2 = centre top 3 = right top 4 = left centre 5 = centre centre 6 = right centre 7 = lleft bottom (default) 8 = centre bottom 9 = right bottom															

- It is recommended to observe that directly after the final sign (ETB) no separator res. fill character such as $\text{C}_{\text{R}}^{\text{L}} \text{F}$ is indicated.
- The printer supports the following PCX versions: 5, 3, 2 and 0.
- It is necessary that the corresponding PCX-file is available as monochrome (black/white).
- The graphic has to be available in the original size as the printer is not able to change the size by itself.

Before print start, indicated by parameter set 'FBC', the definition of field number, lines and pieces has to be effected via the parameter sets (FBA res. FBB).

Example of PCX file

VARIABLES

Set structure

SOH	BM	[n]	=	v	v	(p1	p2	p..	pn)	t1	t2	t..	t70	ETB
-----	----	-----	---	---	---	---	----	----	-----	----	---	----	----	-----	-----	-----

The grey marked part corresponds to the variable definition. The text entered from t1 to t70 is added to the function result of variable.

= start of function

vv variable type
 SC link field
 CN counter
 CC extended counter
 CL date/time
 CU currency variable
 SH shift variable
 UG user guiding
 MD memory card data

(start of variable parameter block

p1...pn variable parameter

) end of variable parameter block

Note: In case you want to print a text which corresponds exactly to the variable definition then you have to place '!' before.

SOH	BM	[n]	!	=	v	v	(p1	p2	p..	pn)	t1	t2	t..	t70	ETB
-----	----	-----	---	---	---	---	---	----	----	-----	----	---	----	----	-----	-----	-----

Link field

SOH	BM	[n]	=	S	C	(p1	;	p2	;	p..	;	pn)	t1	t2	t..	t70	ETB
-----	----	-----	---	---	---	---	----	---	----	---	-----	---	----	---	----	----	-----	-----	-----

= SC identification of link field
 p1...pn identification of link elements (field number or constant text)
 field number is entered without leading '0'
 constant text is included in " but these marks are not printed

Note: Reference fields can be constant text or variables but no link fields.

Example: = SC (1; 2; 3) print: field1field2field3
 = SC (1;"constant"; 2) print: field1constantfield2

Counter

SOH	BM	[n]	=	C	N	(t	;	m	;	c	;	+/-	s	;	i	;	h	;	r)	t1	t2	t..	t70	ETB
-----	----	-----	---	---	---	---	---	---	---	---	---	---	-----	---	---	---	---	---	---	---	---	----	----	-----	-----	-----

= CN identification counter

t type of counter

0 numerical

1 letters only

2...36 radix, base of the counter

m function mode of counter

0 standard

1 return to start value

2 enter the start value at the beginning of printing
(default = existing start value)

3 enter the start value at the beginning of printing
(default = last final number)

4 reset start value at cycle end
(only for DPM IIIi)

5 reset start value by I/O signal

6 time-controlled resetting

7 time-controlled resetting with input of initial value
(default = last final value)

c digit where the numbering starts counting

+/- direction

+ adding

- subtracting

s step width

i update interval

(number of labels with identical number)

h time by which the counter is reset (function mode 6 and 7) in format 'HH:MM'

e.g. 00:00 = reset counter at 0:00

(optional, only for function mode 6 and 7)

r reset value

(optional, only for function mode 6 and 7; default = text and/or initial value)

Limitation:

The time-controlled resetting of counter variable is only effected in case of an active print order. If a print order is cancelled before the specified time and afterwards again restarted then no resetting of counter value is effected.

t1, t2, ... text res. start value of counter

Example:

Entry: = CN (10;7;4;+1;1;06:00;0001)1234

The enquiry for the initial value is effected at print start and at 6:00 the counter variable is reset to value 0001.

Extended counter

SOH	BM	[n]	=	C	C	(+/-	s	;	i	;	m	;	z	;	n	;	x)	t	ETB
-----	----	-----	---	---	---	---	-----	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

= CC identification of numeric counter

+/- direction

+ counter adding

- counter subtracting

s step width

i update interval
(number of labels with identical number)

m function mode of counter

0 standard

1 return to start value

2 enter the start value at the beginning of printing
(default = existing start value)

3 enter the start value at the beginning of printing
(default = last final number)

4 reset start value at cycle end
(only for DPM III)

5 set min. / max. value

6 set start value

7 print end

z leading zeros

0 no leading zeros

1 printout with leading zeros

n minimum value (max. -99999999)

x maximum value (max. 99999999)

t start value

(the number of digits determines the format for the printout with leading zeros
(max. 99999999)

Example:

Entry: = CC (+1;2;5;0;1,999)0050

Print: 50, 51,...999, 1, 2, ...

Format identifier

Standard format	
HH	Hours 2-digit (24 hours)
HE	Hours 2-digit (12 hours)
MI	Minutes 2-digit
SS	Seconds 2-digit
AM	AM/PM output
DD	Day 2-digit
MO	Month 2-digit
YYYY	Year 4-digit
YY	Year 2-digit
Y	Year 1-digit
WW	Calendar week
DW	Day of week (Sunday = 0)
DW1	Day of week (Sunday = 1)
DwX	Day of week For x it is possible to enter any ASCII character from which is counted continuously
DOWxxxxxxxx	Day of week - variable For x it is possible to enter any ASCII character The first ,x' denotes Sunday, the next denotes Monday and so on until Saturday For each weekday a character must be created
DOY	Day of year 3-digit (First January = 1)
DY	Day of year 3-digit (First January = 0)
Examples	
DD.MO.YY	10.09.06
MO/DD/YYYY	09/10/2006
YY-MO-DD	06-09-10
YYMODD	060910

The format identifier 'HE' and 'AM'/'am'/'Am' are supplemented. Therefore the output of hours in 12-hours mode is possible. By the additional output of format identifier 'AM' the output of time in american/english format is possible.

Examples:

=CL(0;0;0;0)<HH:MI:SS>	->	15:30:00
=CL(0;0;0;0)<HE:MI:SS>	->	03:30:00
=CL(0;0;0;0)<HE:MI:SS AM>	->	03:30:00 PM
=CL(0;0;0;0)<HE:MI:SS am>	->	03:30:00 pm
=CL(0;0;0;0)<HE:MI:SS Am>	->	03:30:00 p.m.

By separating the output of time and AM/PM output in 2 text fields, also the following output format is possible:
03:30:00 pm

Extended format	
XMO	Name of month short
XSO	Name of month long
XSD	Weekday short
XLD	Weekday long
For X you can enter the country identification of desired language

Ai application identifier

Example: Field 1 ="00123456789012345675" GS1-128 with AI00

= AI (1;"00")

Printout: 123456789012345675

EPC calculation (Electronic Product Code)*

SOH	BM	[n]	=	E	P	C	(M	;	L	;	F	;	P	;	N1	;	{N2})	ETB
-----	----	-----	---	---	---	---	---	---	---	---	---	---	---	---	---	----	---	------	---	-----

= EPC identification of EPC calculation Kennung EPC Berechnung

M coding method
 L length of manufacturer number (company prefix)
 F filter value
 P verification of check digit
 N1 identification of link element (field number)
 N2 identification of link element (field number) - optional

Note: For more information, visit the following web sites: www.epcglobalinc.org or www.gs1.org

Parameter	Value range		
M	0 = Coding method SSCC96	3 = Coding method GRAI96	
	1 = Coding method SGTIN96	4 = Coding method GIAI96	
	2 = Coding method SGLN96		
L	6...12		
F	Coding SSCC96	Filter value All Others	Binary value 000
		Undefined	001
		Logistical / Shipping Unit	010
	SGTIN96	All Others	000
		Retail Consumer Trade Item	001
		Standard Trade Item Grouping	010
		Single Shipping / Consumer Trade Item	011
	SGLN	All Others	000
		Physical Location	001
	GRAI	All Others	000
	GIAI	All Others	000
P	0 = no verification; 1 = verification of check digit		
N1	any		
N2	any		

Example 1: Field 1 = "00123456789012345675" GS1-128 with AI00
 Field 2 = AI (1;"00") Printout: 123456789012345675
 Field 3 = EPC(0;12;0;1;2) Printout: 3100DA7557D32C38E7000000

The EPC is calculated with the content of Field 2. The coding method SSCC96 is used. In Field 2 a valid NVE must be represented (18-digit, correct check digit).

Example 2: Field 1 = "4141234567890128254123" GS1-128 with AI00, AI254
 Field 2 = AI (1;"414") Printout: 1234567890128
 Field 3 = AI (1;"254") Printout: 123
 Field 4 = EPC(2;10;0;0;2;3) Printout: 3208499602D218000000007B

The EPC is calculated with the content of Field 2 and Field 3. The coding method SGLN96 is used. In Field 2 a valid ILN must be represented (13-digit). In the example, Field 3 contains an optional serial number. No verification of check digit of ILN (8) is effected.

* nur bei Verwendung der Option RFID

PARAMETER SETS

Label parameter

Set label photocell type

Answer

SOH A N - - - - - - p p p p p p p p p ETB

Measure label

In case of loading a new label roll it is possible to start measuring by this command.

The current label and gap length in the printer can be send to the Host computer:

SOH F C B - - - w p p p p p p p p p p p p p p ETB

After this command the printer sends the following answer:

Answer

SOH A E E E S S S S p p p p p p p p p ETB

EEEE indicates the label length in mm (ASCII)

SSSS indicates the gap length in mm (ASCII)

* only Spectra 108/12, 162/12 and SPE 107/12, 160/12

Set measure label automatically after switching on

Set contrast

SOH F C A B - - r N N N - - - - - - ETB

NNN: Indication of contrast in % (010...200)

It is necessary to transmit a 3 digit ASCII number

Enquire contrast

SOH F C A B - - w p p p p p p p p ETB

Answer

SOH A N N N - - - - - - p p p p p p p p ETB

Set flip label

SOH F C D O - - r N - - - - - - - - ETB

N = 0 – flip label Off

N = 1 – flip label On

Enquire flip label

SOH F C D O - - w p p p p p p p p ETB

Answer

SOH A N - - - - - - - - p p p p p p p p ETB

Set label rotation

SOH F C D N - - r X - - - - - - - - ETB

X = 0 – rotate label Off

X = 1 – rotate label On

Enquire label rotation

SOH F C D N - - w p p p p p p p p ETB

Answer

SOH A X - - - - - - - - p p p p p p p p ETB

Label photocell

Enquire minimal measured level at label photocell

SOH	F	C	M	A	A	-	w	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

Answer

SOH	A	N	N	N	-	-	-	-	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

NNN: value of measured level, 3 digit ASCII number in 1/100 V

Enquire maximum measured level at label photocell

SOH	F	C	M	A	B	-	w	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

Answer

SOH	A	N	N	N	-	-	-	-	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

NNN: value of measured level, 3 digit ASCII number in 1/100 V

Set switching threshold of label photocell

SOH	F	C	M	A	C	-	r	N	N	N	-	-	-	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

NNN: value of switching threshold, 3 digit ASCII number in 1/100 V

This value is automatically calculated at measuring process at printer ($\text{min} + \frac{\text{max}-\text{min}}{3}$)

Enquire switching threshold

SOH	F	C	M	A	C	-	w	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

Answer

SOH	A	N	N	N	-	-	-	-	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

NNN: value at measured switching threshold, 3 digit ASCII number in 1/100 V

Enquire current value at transer ribbon photocell

SOH	F	C	M	B	A	-	w	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

Answer

SOH	A	N	-	-	-	-	-	-	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

N = 0 – no transfer ribbon inserted

N = 1 – transfer ribbon inserted

Enquire current value at set label photocell

SOH	F	C	M	B	B	-	w	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

Answer

SOH	A	N	N	N	-	-	-	-	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

NNN: value at label photocell, 3 digit ASCII number in 1/100 V

Dispensing photocell

Enquire condition of dispensing photocell

SOH	F	C	M	B	E	A	w	p	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

Answer

SOH	A	N	-	-	-	-	-	p	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

N = 0 – no label is at photocell

N = 1 – label is at photocell

The set switching threshold of dispensing photocell is taken into consideration.

Printer settings

Set print speed

SOH	F	C	A	A	-	-	r	N	N	N	-	-	-	-	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

NNN: Indication of print speed in mm/s

It is necessary to transmit a 3 digit ASCII number

Spectra 107/12, Spectra 108/12 = 050 - 300	SPE 104/8, SPE 106/12, SPE 160/12 = 050 - 200
Spectra 162/12 = 050 - 150	SPE 107/12, SPE 108/12 = 050 - 300
Spectra 216/12 = 050 - 100	SPE 162/12 = 050 - 150

Enquire speed

SOH	F	C	A	A	-	-	w	p	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

Answer

SOH	A	N	N	N	-	-	-	-	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

Set transfer ribbon control On/Off

SOH	F	C	D	B	-	-	r	N	M	-	-	-	-	-	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

N = 1 – transfer ribbon control Off

N = 0 – transfer ribbon control On

M = 0 – weak sensibility*

M = 1 – strong sensibility*

Enquire transfer ribbon control On/Off

Enquire brightness of display

SOH F C C B A - w p p p p p p p p p p ETB

Answer

SOH A N - - - - - - p p p p p p p p ETB

Set hotstart On/Off

SOH F C D W - - r N - - - - - - - - - ETB

N = '0' – hotstart Off

N = '1' – hotstart On

Enquire hotstart On/Off

Enquiry/Restart/ETB

Answer

SOH A N - - - - - - p p p p p p p p ETB

Set autoload

Set autoload

N = 0 – Off

N = 0 = On
N = 1 = On

Enquire autoload

Enquiry auto-load

Answer

Answer SOH A N - - - - - - p p p p p p p p p ETB

Interface

You can set the parameter of the serial interface by the following commands but you have to note that after sending one of the commands also the host computer changes the corresponding parameter of its interface to allow further communications Host computer – printer.

For all interface commands the interface is fixed with x. Allowed are the following values:

x = 1 ⇒ COM 1

x = 2 ⇒ COM 2

In all other cases automatically the first serial interface is addressed.

In the answers the addressed interface is also returned.

Set all interface parameter

SOH	F	C	F	F	x	-	r	m	;	b	;	p	;	d	;	s	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

m = mode (0 = Off, 1 = On, 2 = On, without error message)

b = Baudrate (2400, 4800, 9600, 19200, 38400, 57600)

p = parity (n = no parity, e = even parity, o = odd parity)

d = number of data bits (7, 8)

s = number of stop bits (1, 2)

Enquire all interface parameter

SOH	F	C	F	F	x	-	w	p	p	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

Answer

SOH	A	x	;	m	;	b	;	p	;	d	;	s	;	p	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

Example: activate interface COM1 and set 9600 Baud, no parity, 8 data bits, 2 stop bits

[SOH]FCFF1-r1;9600;n;8;2[ETB]

Interface protocol

There are two different interface protocols available. Usually SOH = 01_{Hex} and ETB = 17_{Hex}. However there are host computers (e.g. AS/400), which can not work with these characters. Therefore you can switch SOH = 5E_{Hex} and ETB = 5F_{Hex}. The host computer has to change the corresponding parameter as well.

Set SOH and ETB

SOH	F	C	G	C	-	-	r	N	-	-	-	-	-	-	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

N = 0 - SOH = 01_{Hex}, ETB = 17_{Hex}

N = 1 - SOH = 5E_{Hex}, ETB = 5F_{Hex}

Enquire SOH and ETB

SOH	F	C	G	C	-	-	w	p	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

Answer

SOH	A	N	-	-	-	-	-	p	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

Data memory

Set data memory

SOH F C G D - - r M - - - - - - - - ETB

M = 0 Off, after receiving FBBCA0r or FBDA0r the interface is locked until the end of the print order, i.e. you cannot write more data in the receiving buffer.

M = 1 Standard, after starting a print order no data of the receiving buffer are processed but it is possible to write more data in the receiving buffer until it is full.

M = 2 Extended, after starting a print order it is possible to write more data in the receiving buffer. These data is processed during the print and the next label is prepared.

Enquire data memory

Answer

SOH A M - - - - - - p p p p p p p p ETB

Set reaction to unknown interrogative set

Contraction to unknown interrogative set

N – Indication of value between 0 and 3

Enquire reaction to unknown interrogative set

SOH F C G E A - w p p p p p p p p p ETB

Answer

SOH A N - - - - - - p p p p p p p p ETB

Set port transmission

Set port transmission:

SOH	F	C	G	F	-	-	r	S	T	-	-	-	-	-	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

S - Source (indication of source port)

T - Target (indication of target s)

Port numbers: 1 - 6

Port number: 1 = COM1
2 = COM2 (depending on printer)
3 = LPT
4 = USB
5 = TCP (option)
6 = UDP (option)

Enquire port transmission

SOH F C G F - - w p p p p p p p p p ETB

Answer

SOH A " S1-T1 : S2-T2 : ... ID : p p p p p p p p p p p p p p " ETB

Offset values

Set zero point displacement (Offset 2)

SOH	F	C	C	D	-	-	r	V	N	N	N	-	-	-	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

V: pre-sign of offset (+ or -)

NNN: offset value, 3 digit ASCII number in 1/10 mm

Enquire zero point displacement (Offset 2)

SOH	F	C	C	D	-	-	w	p	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

Answer

SOH	A	V	N	N	N	-	-	-	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

Set displacement in direction X (Offset 3)

SOH	F	C	C	E	-	-	r	V	N	N	N	-	-	-	-	ETB

Automatically adjust clock for daylight saving changes

Because of the fact that there is no world-wide regulation if and when a changing of time between summer and wintertime (normal time) in the individual countries takes place, we distinguish between the following four formats for the definition for beginning and end of summertime.

F 0:	european format start of summertime = last Sunday in March end of summertime = last Sunday in October W: week (1 = first, ..., 5 = last) WD: day of week (0 = Sunday, ..., 6 = Saturday) MM: month (01 = January, ..., 12 = December)
F 1:	fix date with indication of year DD: day MM: month (01 = January, ..., 12 = December) YY: year
F 2:	fix date without indication of year DD: day MM: month (01 = January, ..., 12 = December)
F 3:	week day after day in month WD: day of week (0 = Sunday, ..., 6 = Saturday) DD: after day (only the first day is taken into consideration) MM: month (01 = January, ..., 12 = December)

Set automatically adjust clock for daylight saving changes

SOH	F	C	I	G	-	-	r	N	-	-	-	-	-	-	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

Enquire automatically adjust clock for daylight saving changes

SOH	F	C	I	G	-	-	w	p	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

Answer

SOH	A	N	-	-	-	-	-	-	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

N = 0 – Automatically adjust clock for daylight saving changes Off

N = 1 – Automatically adjust clock for daylight saving changes On

Set beginning of summertime

F 0: SOH F C I H - - r F W ; WD ; M M ; H H ; M M ETB
F 1: SOH F C I H - - r F D D ; M M ; Y Y ; H H ; M M ETB
F 2: SOH F C I H - - r F D D ; M M ; H H ; M M ETB
F 3: SOH F C I H - - r F WD ; D D ; M M ; H H ; M M ETB

Enquire beginning of summertime

SOH	F	C	I	H	-	-	w	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

Answer

SOH	A	F	W	W	D	M	M	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

The answer depends on each set format.

Set end of summertime

F 0: SOH F C I I - - r F W ; WD ; M M ; H H ; M M ETB
F 1: SOH F C I I - - r F D D ; M M ; Y Y ; H H ; M M ETB
F 2: SOH F C I I - - r F D D ; M M ; H H ; M M ETB
F 3: SOH F C I I - - r F WD ; D D ; M M ; H H ; M M ETB

Enquire end of summertime

SOH	F	C	I	I	-	-	w	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

Answer

SOH	A	F	W	W	D	M	M	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

The answer depends on each set format.

Set time shifting

SOH	F	C	I	J	-	-	r	N	N	N	-	-	-	-	ETB

Print

Set line number of label (n digits)

SOH	F	B	A	A	-	-	r	N	ETB
-----	---	---	---	---	---	---	---	---	-----

N: Indication of line number in ASCII (1, 10, 100, ...)

Enquire line number of label

SOH	F	B	A	A	-	-	w	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

Answer

SOH	A	N	-	-	-	-	-	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

Start /Stop command

Additionally to the start / stop command it is possible to interrupt a print order via parameter / remote set.

SOH	F	D	-	-	-	-	r	N	-	-	-	-	-	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

N = '0' – interrupt printing

N = '1' – continue printing

N = '2' – cancel print order, when it is already stopped

Reset error

Reset error

SOH	F	C	M	H	-	-	r	N	N	N	N	-	-	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

NNNN = Indication of current error ID or "9999"

Enquire error

SOH	F	C	M	H	-	-	w	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

Answer

SOH	A	N	N	N	N	0	0	0	0	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

Readout error ID and error text

SOH	F	C	M	H	A	-	w	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

Answer

SOH	A	N	N	N	N	;	error text	;	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	------------	---	---	---	---	---	---	---	-----

Item number of print order

By means of this command the Host computer can enquire following item numbers:

Complete number of current print order

SOH	F	B	B	A	-	-	w	p	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

Number of labels which are still to print

SOH	F	B	B	B	-	-	w	p	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

Number of labels which are already printed

SOH	F	B	B	C	-	-	w	p	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

Interval in cutter mode

SOH	F	B	B	D	-	-	w	p	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

At the end of one of these commands the printer returns the corresponding number as ASCII value (4 res. 5 digits) in the answer set.

Answer

SOH	A	N	N	N	N	-	-	-	-	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

With this set it is also possible to transmit the item number of print order and the interval (in cutter mode) to the printer.

Item number of print order

SOH	F	B	B	A	-	-	r	N	N	N	N	N	-	-	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

NNNNN: 5 digits item number of order

Interval in cutter mode

SOH	F	B	B	D	-	-	r	N	N	N	N	N	-	-	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

NNNNN: Interval

Start printing

SOH F B C - - - r - - - - - - - - - - - ETB

This command starts the print order which is actually set in the printer. The current parameter such as print mode, speed, initialisation etc. are used. Therefore it is possible to print e.g. item numbers with 5 digits. However, before you have to transmit the corresponding item number with set 'FBBA'.

SOH F B D - - - r - - - - - - - - - ETB

Start printing (see above) but without tear off offset.

SOH F B E - - - r n n n n n n n n n n n n n n ETB

With this command the printjob identifier which appears in "printing" res. "stopped" window is assigned to a print order. In case that only blanks are transmitted, then the printjob identifier is deleted and the display shows "noname".

Initialisation of page handling

SOH F B F - - - r ETB

Selection of current page

SOH F B G - - - r N ETB

N: current page number (1..10)

Select order of pages which are to print

SOH F B H - - - r P₁ P₂ P₃ ETB

$P_1; P_2; \dots$ = pages which are to print

Generation of page without print start

Generation of page without print start

With this command the corresponding page is only generated, i.e. no print start signal is sent.

With this command the corresponding page is only generated
S = 1: sorted (printed are e.g. pages 1-5, then again 1-5 etc.)

$S = x$: unsorted (printed are x times page 1, then x times page 2, etc.)

Feed

Release a label feed

SOH F E - - - - r - - - - - - - - - ETB

Test print

Release a test print

SOH F F - - - - r - - - - - - - - - ETB

Status print

Parameter set in order to print status report

SOH F C M Q - - r N - - - - - - - - - ETB

N = 0: Printer settings

N = 1: Bar codes

N = 1: Bar 3

Cancel print orders

Cancel all active print orders

SOH F G A - - - r N - - - - - - - - - ETB

N = -: Cancel active print orders and delete all label data

N = 1: Cancel active print orders and receive label data

With the execution of this command:

- possible upcoming errors are confirmed
 - possible upcoming customised entries are cancelled

Remote console

Set port

SOH F C R A - - r N - - - - - - - ETB

N = 0 – Off

N = 1 – COM1

N = 2 – Ethernet

Enquire port

SOH F C R A - - w p p p p p p p p p p p p p ETB

Answer

SOH A N - - - - - - p p p p p p p p p ETB

Set sending interval of display contents

SOH F C R B - - r N N N N - - - - ETB

N = 0 – on demand

$N = 1$ – at each changing of display contents

N = 500...5000 – sending interval in ms

Enquire interval of display contents

SOH F C R B - - W p p p p p p p p p p ETB

Answer

SOH A N N N N N - - - - p p p p p p p p p p p ETB

Emulation

Set emulation

N = 0 – CVPL (Carl Valentin Programming Language)

N = 1 – ZPL II® (Zebra Programming Language)

Enquire emulation

SOH F Z - - - - W p p p p p p p p p p p p p p ETB

Answer

ANSWER: SOH A N - - - - - - p p p p p p p p p ETB

PARAMETER SETS FOR OPTIONS

Network

Sets for option Ethernet

General

SOH	F	C	L	A	-	-	r	C	0	A	8	0	0	0	1	5	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

All network parameter sets start in the third column with a 'L'. Column 4 shows the identification for the corresponding network parameter. Column 5 can show another sub-identification.

Because of the fact that the argument size is limited to 8 characters, the IP addresses (IP address, network mask, gateway address) which consist of 32 bit are transmitted in HEX presentation. For all data which is transmitted in HEX presentation (also the MAC address) it is allowed to use capital as well as small letters.

In contrary to the parameter settings of the other interfaces, the settings of the following sets were saved immediately onto Flash, i.e. it is not necessary to save the currently set configuration before switching off the printer so the modifications are still available after switching on.

So that the made modifications become active, also without printer Reset it is necessary to transmit a corresponding Z set which effects a Reset of the network devices.

Set IP address (e.g. 192.168.0.21)

SOH	F	C	L	A	-	-	r	C	0	A	8	0	0	0	1	5	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

Enquire IP address

SOH	F	C	L	A	-	-	w	C	0	A	8	0	0	0	1	5	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

Answer

SOH	A	C	0	A	8	0	0	0	1	5	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

Set netmask (e.g. 255.255.255.0)

SOH	F	C	L	B	-	-	r	F	F	F	F	F	F	0	0	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

Enquire netmask

SOH	F	C	L	B	-	-	w	F	F	F	F	F	F	0	0	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

Answer

SOH	A	F	F	F	F	F	F	0	0	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

Set Gateway address (e.g. 192.168.0.1)

SOH	F	C	L	C	-	-	r	C	0	A	8	0	0	0	1	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

Enquire Gateway address

SOH	F	C	L	C	-	-	w	C	0	A	8	0	0	0	1	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

Answer

SOH	A	C	0	A	8	0	0	0	1	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

NTP Server

NTP (Network Time Protocol) is a standardised Internet protocol permitting the synchronisation of real-time clocks of network participants. The printer connects itself with a time server and align every 60 minutes its internal real-time clock with that of the time server in order to correct possible differences.

The address of server (IP address) can be freely configured in the printer. The communication is effected by UDP and the fixed set port 123. The service in the printer is deactivated by transmitting the server address 0.0.0.0.

The time servers work together with the coordinated world time (UTC) and therefore an additional time shift is needed compared to the reference time. For Germany it is e.g. +1 hour.

The current state of the connexion can be queried with a status set.

Set NTP Server IP

SOH	F	C	L	N	I	-	r	N	ETB
-----	---	---	---	---	---	---	---	---	-----

N = X.X.X.X (X = 0..255)

Enquire NTP Server IP

SOH	F	C	L	N	I	-	w	pppppppp	ETB
-----	---	---	---	---	---	---	---	----------	-----

Answer

SOH	A	N	N	N	N	N	N	N	p p p p p p p p	ETB
-----	---	---	---	---	---	---	---	---	-----------------	-----

0.0.0.0 deactivates the NTP service

Readout NTP status

SOH	F	C	L	N	S	-	w	pppppppp	ETB
-----	---	---	---	---	---	---	---	----------	-----

Answer

SOH	A	N	-	-	-	-	-	p p p p p p p p	ETB
-----	---	---	---	---	---	---	---	-----------------	-----

N: OK / ERROR / OFF

Set time zone (hour offset)

SOH	F	C	L	N	Z	-	r	N	ETB
-----	---	---	---	---	---	---	---	---	-----

N: -12, 12

Enquire time zone (hour offset)

SOH	F	C	L	N	Z	-	w	pppppppp	ETB
-----	---	---	---	---	---	---	---	----------	-----

Answer

SOH	A	N	N	N	N	N	N	N	p p p p p p p p	ETB
-----	---	---	---	---	---	---	---	---	-----------------	-----

Reset network device

SOH	F	C	L	Z	-	-	r	-----	ETB
-----	---	---	---	---	---	---	---	-------	-----

For this set is no enquiry possible. This set causes that modifications made by the transfer of the previous sets become effective.

Memory Card

Save a label onto Memory Card

SOH	F	M	A	O	-	-	r	F	ETB
-----	---	---	---	---	---	---	---	---	-----

- O - In case a label with the entered name exists already then the label is overwritten without an enquiry.
 If you enter another value as 0, an enquiry appears demanding if you want to overwrite.
- F - File name of the label which is to save. Drive* and path name are optional, i.e. the file name is allowed to have more than 8 characters but is limited to 79.

Load a label from Memory Card

SOH	F	M	B	-	-	-	r	F	ETB
-----	---	---	---	---	---	---	---	---	-----

- F - File name of label which is to load. Drive* and path name are optional, i.e. the file name is allowed to have more than 8 characters but is limited to 79.

Delete a label from Memory Card

SOH	F	M	C	-	-	-	r	F	ETB
-----	---	---	---	---	---	---	---	---	-----

- F - File name of label which is to delete. Drive* and path name are optional, i.e. the file name is allowed to have more than 8 characters but is limited to 79.

Format Memory Card

SOH	F	M	D	-	-	-	r	D	ETB
-----	---	---	---	---	---	---	---	---	-----

- D - Optional drive* identification with colon (e.g. A:).
 In case no drive is indicated, then the currently selected is formatted.

Copy Memory Card

SOH	F	M	E	-	-	-	r	D	ETB
-----	---	---	---	---	---	---	---	---	-----

- D - Optional drive* identification with colon (e.g. B. B: → A:)
 In case no drives are indicated it is copied from the current to the current drive (A: → A:
 or B: → B:).
 The indication '→' indicates the direction of the copying process, i.e. the source drive is at the left side and the final drive at the right side.

* Printers from the series Spectra/SPE are equipped with 2 PCMCIA Memory Card drives. The left drive (front view) is called A and the right drive called B.

Save graphic onto Memory Card

Cancel function: no graphic is saved onto Memory Card

SOH	F	M	F	A	-	-	r	ETB
-----	---	---	---	---	---	---	---	-----

No parameter necessary

Activate function

SOH	F	M	F	B	-	-	r	F	ETB
-----	---	---	---	---	---	---	---	---	-----

F – File identification, optional drive * and directory identification

Accept function: save graphic from print buffer onto Memory Card

SOH	F	M	F	C	O	-	r	ETB
-----	---	---	---	---	---	---	---	-----

O - In case a label with the entered name already exists, then it is overwritten without an enquiry.
If you enter another value as 0, an enquiry appears demanding if you want to overwrite.

Readout table of contents

SOH	F	M	G	-	-	-	w	X	ETB
-----	---	---	---	---	---	---	---	---	-----

X = Drive [A,B] (optional)

Answer:

The complete table of contents of the indicated drive is returned. The directory entries show the following format:

SOH	A	F	S	A	ETB
-----	---	---	---	---	-----

F = File name

S = File size and/or <DIR> for directory

A = File attributes

Readout free memory space

SOH	F	M	H	-	-	-	w	X	p	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

X = Drive [A,B] (optional)

Answer:

SOH	A	X	n	n	n	n	-	-	-	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

X = Drive [A,B]

n = Memory space in KB

* Printers from series Spectra/SPE are equipped with 2 PCMCIA Memory Card drives. The left drive (front view) is called A and the right drive called B.

Create directory

SOH	F	M	I	-	-	-	r	P	ETB
-----	---	---	---	---	---	---	---	---	-----

P = Drive* and directory identification

Create directory

(create directory without warning in case the directory is already existing)

SOH	F	M	I	O	-	-	r	P	ETB
-----	---	---	---	---	---	---	---	---	-----

O - In case a directory with the entered name already exists, then it is overwritten without an enquiry.

If you enter another value as O, an enquiry appears demanding if you want to overwrite.

P - Drive* and directory identification

Delete directory

SOH	F	M	J	-	-	-	r	P	ETB
-----	---	---	---	---	---	---	---	---	-----

P = Drive* and directory identification

Note that it is impossible to delete the current directory!

Change directory

SOH	F	M	K	-	-	-	r	P	ETB
-----	---	---	---	---	---	---	---	---	-----

P = Drive* and directory identification

Transfer file from printer

SOH	F	M	L	-	-	-	w	F	ETB
-----	---	---	---	---	---	---	---	---	-----

F - File name of file which is to transfer. Drive* and path name are optional, i.e. the file name is allowed to have more than 8 characters but is limited to 79.

Answer:

SOH	A	F	*	S	ETB	Data
-----	---	---	---	---	-----	------

F = File name

S = File size in Byte

* Printers from series Spectra/SPE are equipped with 2 PCMCIA Memory Card drives. The left drive (front view) is called A and the right drive called B.

Cutter***Set cutter mode**

SOH	F	C	D	D	-	-	r	N	-	-	-	-	-	-	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

N = 0 – cutter mode Off

N = 1 – single cut

N = 2 – mode 1 (w/o cutter offset), print no. of pieces w. cut after each label w/o backfeed

N = 3 – mode 2 (w backfeed), print no. of pieces w. cut after each label w. backfeed

N = 4 – interval cut with final cut, transmit interval width later

N = 5 – interval cut without final cut, transmit interval width later

N = 6 – final cutt (cut after print end)

Enquire cutter mode

Enquiry dispense lever protocol

Answer

ANSWER: SOH A V N N - - - - p p p p p p p p ETB

Output

Input

Circumstance I

Control of printer is effected by an electronic connection of an external control (e.g. PLC) at galvanically separated I/Os of printer. Here by the dispensing inputs the corresponding functions can be released according to settings of input trigger. At dispensing outputs, different operating conditions are signalled.

Example.: A label print should be released

Printer is in a dispensing mode, a print order is started and printer is in 'wainting' mode. The corresponding functions lay on dispensing input IN1. For this entry the input trigger is on '1' (increasing flank). If the connected control (PLC) now a tension of approx. 24V on IN1, the printer starts the label print. If the input trigger is set to '0' (falling flank), printer should start the label print if no more tension is set to IN1.

Use the following parameter sets in order to execute the corresponding settings.

Enquire current status of dispenser inputs

SOH	F	C	M	D	A	-	w	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

Circumstance II

Control of printer is effected by parameter sets, i.e. by Ethernet or serial interface (e.g. PC).

With beginning of software version 1.44 it is possible to execute the before mentionned functions by parameter sets and to use dispensing inputs and outputs for the control of external applications/machines.

The release of a label print can consequently be released by the simulation of an active signal at IN1 (soh) ... (etb). The allocation of a function to a dispensing input depends on printer model.

If signals of an external application/machine are connected, its current status can be identified by (soh)FCMDA-wppppppp(etc).

The current operating mode of printer is signalised by the corresponding status messages (cp. auto status, status enquiry, ...).

If control signals of an external application/machine connected to dispensing outputs, these can be set by (soh)FCMDB-r12345678(etc).

Listed below are the corresponding parameter sets.

Set I/O protocol port

SOH	F	C	M	D	E	-	r	T	C	P	-	-	-	-	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

Enquire save start signal

SOH F C S D E - w p p p p p p p p p p p p p p ETB

Antswer

ANSWER:
SOH A N - - - - - - p p p p p p p p ETB

Set cancel continuous print (operating mode)

Set cancel continuous print (operating mode)

N: 0 = Off
1 = On

Enquire cancel continuous print (operating mode)

Enquiry cancer continuous print (operating mode)

Answer

ANSWER: SOH A N E - - - - - p p p p p p p p p ETB

Dispensing photocell

Enquire current value at dispensing photocell

Enquire current value at dispensing protocol

Answer

SOH A N N N - - - - - p p p p p p p p p ETB

NNN: value of dispensing photocell, 3 digit ASCII number in 1/100 V

Enquire condition of dispensing photocell

Enquiry condition of dispensing photos:

Answer

SOH A N - - - - - - p p p p p p p p p ETB

N = 0 – no label is at photocell

N = 1 – label is at photocell

The set switching threshold of dispensing photocell is taken into consideration.

Scanner

Set scanner operating mode

SOH	F	C	D	M	-	-	r	M	P	N	F	-	-	-	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

M = Operating mode

0 = Off

1 = Mode 1 (data comparison)

2 = Mode 2 (check only readability)

P = Interface

0 = COM1

1= COM2

This parameter is ignored as COM2 is always used as scanner interface at the moment.

N = Number of bad readings (NoRead)

N = -,0 ... 8 (- = 0 NoReads, 0 = 1 NoRead ... 8 = 9 NoReads)

Number of consecutive bad readings after which an error message appears.

At '-' (0 NoReads) no error message appears, i.e. the print is not interrupted. Only a warning is displayed at the screen.

F = Label feed (FeedLabel)

F = 0 ... 4 (0 = 1 FeedLabel... 4 = 5 FeedLabels)

Enquire scanner operating mode

N = Cuttent scan length in 1/10 mm

Set scan mode

SOH F C D M C - r N - - - - - - - - ETB

N = 0 – scan during printing

N = 1 – scan after printing

Enquire scan mode

SOH F C D M C - w p p p p p p p p p p p p p p ETB

Answer

SOH A N - - - - - - p p p p p p p p ETB

N = current scan mode

Set scan delay (scan after printing)

SOH F C D M P - r N N N N - - - - ETB

N = scan delay in ms [0...9990]

Require scan delay

Answer

ANSWER: SOH A N N N N - - - - p p p p p p p p p FTB

N = current scan delay ms

Set scan timeout (scan after printing)

Set scan timeout (scan after printing)

SOH	E	C	D	M	E	-	r	N	N	N	N	-	-	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

`N` = scan timeout in ms [0..9990]

Require scan timeout

Require scan timeout

Answer

Answer SOH A N N N N - - - - p p p p p p p p p p ETB

$N \equiv$ current scan timeout in ms

Scanner variable

In mode 1 (data comparison) it is necessary to fix the order of bar code data to scann several codes onto one label. Because of this reason bar code data has to be defined as scanner variable in text sets. The text set has the following structure:

SOH	BM	[n]	=	S	V	(a ; f)	text data	ETB
-----	----	-----	---	---	---	---	---------------	-----------	-----

=SV identification scanner variable

a field active (0 = not active, 1 = active, i.e. code is scanned)

f field number for definition of code order (1 ...)

Examples

fixed text:

(SOH)BM[1]=SV(1;1)123456(ETB)

variable text (counter):

(SOH)BM[1]=SV(1;1)=CN(10;0;4;+1;1)0001(ETB)

Save configuration permanent

In case you want to save the described settings permanent into the printer, then you have to transmit the following command to the printer.

SOH	F	X	-	-	-	-	r	N	-	-	-	-	-	-	-	-	ETB
N: 0 = save current parameter																	
1 = set all parameters to default values																	

Readout configuration

SOH F X - - - - W - - - - - - - - - ETB

The printer sends as answer all current settings as parameter sets.

Status enquiry

Host computer can receive information about the printer by the serial interface. The status enquiry has the following data format:

SOH	S	ETB
-----	---	-----

 S = ASCIIIs

Status return information:

After receiving the status enquiry the printer sends the corresponding status return information.

Data format of status enquiry

SOH	1. Byte								2. Byte								5. – 1. digit				ETB	
	8	7	6	5	4	3	2	1	8	7	6	5	4	3	2	1						

1. Byte	=	1. status byte
		8. Bit = free 7. Bit = always set 6. Bit = free 5. Bit = 1 – active print order 0 – no. of pieces = 0 (no print order) 4. Bit = 1 – stop key activated 0 – stop key not activated 3. Bit = cutter error 0 – no error; 1 – error 2. Bit = labels 0 – no error; 1 – error 1. Bit transfer ribbon 0 – no error; 1 – error
2. Byte	=	2. status byte 8. Bit = free 7. Bit = free 6. Bit = free 5. Bit = free 4. Bit = free 3. Bit = memory card 2. Bit = mask set 1. Bit = printhead temperature
5.-1. position	=	number of pieces with 5 digits as ASCII characters min. '00000' / max. '65535'

AUTOSTATUS

The printers are equipped with an auto status function, i.e. in certain operating modes the printer actively sends the corresponding status. This can be enquired by the serial interface.

To activate the auto status, the host computer has to send the following command to the printer:

SOH	G	1. Byte	2. Byte	ETB
-----	---	---------	---------	-----

Each of the below indicated message which is observed and send by the printer has to be transmitted with a set Bit (see table below 1. Byte and 2. Byte) to the printer via the auto state function. The printer sends after each performed condition the corresponding message (answer) to the host computer.

The following messages are provided:

1 Start of generation

2 End of generation

The printer sends this state in case data for a complete label was generated. The test print was not taken into consideration.

For counters/date variables the printer sends for each label a status cycle (start, end).

3 Start of printing

4 End of printing

The start of the print is send in case the generated data is send.

The end of the print is send in case the print of the label is finished and the motor has stopped.

5 Start of cutting

6 End of cutting

This status describes the cutting. Here it is possible to check the end of the cutting at timeout
→ error.

7 Start of feeding

8 End of feeding

This status is send in case an additional feeding (dispenser, cutter, tear off) is released.

9 Start of a print order

10 End of print order

This status signalises the start and end of a complete print order (1...99999 labels). This status is active in all operating modes.

11 Error

This status message is send in case an error occurs.

The printer sends the auto status in the following format to the host computer:

SOH	G	1. Byte	2. Byte	ETB
-----	---	---------	---------	-----

1. Byte

8. Bit	7. Bit	6. Bit	5. Bit	4. Bit	3. Bit	2. Bit	1. Bit
start generating	end generating	start printing	end printing	start cutting	end cutting	start feeding	always 0

2. Byte

8. Bit	7. Bit	6. Bit	5. Bit	4. Bit	3. Bit	2. Bit	1. Bit
end feeding	start print order	end print order	error	free	free	free	always 0

Attention: Bit 1 has to be in 1. Byte and 2. Byte always 0, otherwise the printer possibly could recognise SOH or ETB.

At the status message of the printer to the host computer always at least 1 Bit is set. However, it could be occur that several Bits are set at the same time.

At the status demand of the host computer to the printer it is also possible that several Bits are set at the same time.

The auto status demand is saved in the printer, i.e. it is set to 0 after switching off/on. Therefore it is necessary to demand it anew after each time the printer is switched on.

Example:

The printer should observe the start of a print order. For this the host computer sends the following demand to the printer.

SOH	G	00000000	01000000	ETB
-----	---	----------	----------	-----

After the condition is fulfilled (= start of the print order) the printer sends the following message to the host computer:

SOH	G	00000000	01000000	ETB
-----	---	----------	----------	-----

With regard to the contents the answer corresponds always to the format set.

FONT EXAMPLES

Bitmap fonts (not proportional)

Font 01 (8 x 11) ratio 3:3
Font 02 (12 x 17) ratio 3:3
 Font 03 (18 x 26) ratio 2:2
Font 04 (40 x 56) ratio 1:1
 Font 05 (18 x 32 with descender) ratio 2:2
 Font 07 (12 x 22 with descender) ratio 2:2

Bitmap fonts (proportional)

Font 21 (10 proportional) ratio 3:3
 Font 22 (18 proportional) ratio 2:2
Font 23 (26 proportional) ratio 2:2
Font 24 (56 proportional) ratio 1:1
 Font 28 (40 proportional) ratio 1:1
 Font 29 (8 proportional) ratio 5:5

Vector fonts

Absender (Baskerville) <u>Gold, Petra (Swiss Light)</u> Name, Vorname (Helvetica Bold)	Das ist ein Musteretikett für die Darstellung der Schriftarten (Monospace)
<u>Goldstraße 456 (Swiss Light)</u> Straße, Hausnummer (Helvetica Bold)	
<u>23456 Golddorf (Swiss Light)</u> PLZ, Ort (Helvetica Bold)	Empfänger (Baskerville)
<i>Musterlieferung Bitte bestätigen Sie den Empfang. (Brush Script)</i>	<u>Mustermann, Max (Helvetica Roman)</u> Name, Vorname (Helvetica Bold)
	<u>Musterstraße 123 (Helvetica Roman)</u> Straße, Hausnummer (Helvetica Bold)
	<u>45678 Musterstadt (Helvetica Roman)</u> PLZ, Ort (Helvetica Bold)
